

find the missing angle triangle by taking
2 angles $\frac{1}{2} \times w \times h$

Algorithm

- 1) start
- 2) Take the input of 2 angles
- 3) ~~subtract~~ the ^{sum 2} angles from 180.
- 3) sum of given 2 angles
- 4) subtract from the ~~180~~ 2 angles from 180°
- 5) display the missing angle
- 6) end.

⑤ remove last digit from given number

algorithm

- 1) start
- 2) Take input of given number
- 3) ^{float}dividing the number by 10
- 4) display the ~~remaind~~ ^{quo} last digit
- 4) display the number without last digit of given number.
